Unlike a catalytic converter which is a flow-through device, a DPF retains bigger exhaust gas particles by forcing the gas to flow through the filter; however, the DPF does not retain small particles and maintenance-free DPFs break larger particles into smaller ones. [citation needed] There are a variety of diesel particulate filter technologies on the market.

Experience in a Book Lucas Ignition (to 1989) IGNITION SYSTEM DESIGN: An ignition coil requires a certain amount of time to build up enough energy to produce a spark. The faster an engine is turning, the less time there is between sparks, so the output of an ignition coil starts to drop off.

Idle speed is cycling up and down or engine is racing. Often blamed on the temperature sensor or the idle speed control valve, the engine idle speed may drop and rise periodically, or the engine may 'race' - ie. hold high revs when it should be stable.

The lead-acid battery was invented in 1859 by French physicist Gaston Planté and is the earliest, yet still most widely used, [not verified in body] type of rechargeable battery. Despite having a very low energy-to-weight ratio and a low energy-to-volume ratio, its ability to supply high surge currents means that the cells have a relatively large power-to-weight ratio.
