By this time your coursework in college chemistry and math will more than make up for the lack of high school physics. Students who didn't have high school physics should take at least the first quarter of chemistry (CHEM 142 or 145) before taking PHYS 121.

Mathematics contains hypotheses, while physics contains theories. Mathematics statements have to be only logically true, while predictions of physics statements must match observed and experimental data. The distinction is clear-cut, but not always obvious. For example, mathematical physics is the application of mathematics in physics.

In "The Mathematics of Physics and Chemistry" [Margenau and Murphy], the section about the existence of integrating factors comprehensively treated exact and inexact differentials. The chapter on the application of Jacobians [functional determinants] to thermodynamics was in my opinion, excellent and not to be found elsewhere.
