Show Internal Organs Of The

Organs are groups of tissues with similar functions. Plant and animal life relies on many organs that coexist in organ systems.. Organs are composed of main tissue, parenchyma, and "sporadic" tissues, stroma.The main tissue is that which is unique for the specific organ, such as the myocardium, the main tissue of the heart, while sporadic tissues include the nerves, blood vessels, and ...

Organ (anatomy) - Wikipedia

The main systems of the human body are: . Circulatory system: . Circulates blood around the body via the heart, arteries and veins, delivering oxygen and nutrients to organs and cells and carrying their waste products away.; Keeps the body's temperature in a safe range. Digestive system and Excretory system: . System to absorb nutrients and remove waste via the gastrointestinal tract ...

List of systems of the human body - Wikipedia

It is believed that the process of mummification was developed at least 2,500 years before the birth of Christ. The process included four phases: the removal of the internal organs, the use of a salt compound to dry the hollow body, filling the dried body with a stuffing to restore its original shape and finally, tightly wrapping the body with strips of linen.
