The Evolution Of Human Sexuality

Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates—in particular genus *Homo*—and leading to the emergence of *Homo sapiens* as a distinct species of the hominid family, the great apes. This process involved the gradual development of traits such as human bipedalism and language, as well as ...

Human sexuality is the way people experience and express themselves sexually. This involves biological, erotic, physical, emotional, social, or spiritual feelings and behaviors. Because it is a broad term, which has varied over time, it lacks a precise definition. The biological and physical aspects of sexuality largely concern the human reproductive functions, including the human sexual ...

Human health and psychology. The best discussion of how the human set of two-genders evolved, and why the ratio between men and women is 50:50, is found in the groundbreaking "The Selfish Gene" by Prof. Richard Dawkins 19. Many animal species share a common set of sexualities: heterosexuals, homosexuals and plenty of dysfunctionals, plus lots of situation-dependent behaviour.

Evolution is a scientific theory used by biologists. It explains how living things change over a long time, and how they have come to be the way they are.. Earth is very old. By studying the layers of rock, we can find out about its past. That kind of research is called historical geology.. We know that living things have changed over time, because we can see their remains in the rocks.
